

JVC

SERVICE MANUAL

MODEL
L·L1

LINEAR TRACKING
FULLY AUTOMATIC
TURNTABLE

No. 2658
Rev. 1983

Safety Precaution

1. The design of this product contains special hardware, many circuits and components specially for safety purposes.

For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.

2. Alterations of the design or circuitry of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the product have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the parts list in Service manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list in Service manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and/or the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard.
When service is required, the original lead routing and dress should be observed, and they should be confirmed to be returned to normal, after re-assembling.

5. Leakage current check

(Safety for electrical shock hazard)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the Products (antenna terminals, knobs, metal cabinet, screw heads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5 mA AC (r.m.s.).

- Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.). Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

Fig. 1

CHECKING YOUR LINE VOLTAGE (For U.S. Military Market and Other Countries)

Before inserting the power plug, please check this setting to see that it corresponds with the line voltage in your area. If it doesn't, be sure to adjust the voltage selector switch to the proper setting before operating this equipment. The voltage selector switch is located underneath the platter on the cabinet.

CAUTION Before selecting the "Voltage selector switch" to proper voltage disconnect the power plug.

Features

- Linear tracking tonearm
- Fully automatic mechanism
- Plug-in MM cartridge
- Independent suspension system permits greater howling margin.

1. Specifications

MOTOR SECTION

Motor	: DC servo-motor
Drive system	: Belt drive
Speeds	: 33-1/3, 45 rpm
Wow and flutter	: 0.045 % (WRMS)
Signal-to-noise ratio	: 70 dB (DIN-B)

TONARM SECTION

Type	: Linear tracking statically balanced low-mass arm
------	--

Effective length	: 157 mm
Tracking error	: 25'

CARTRIDGE SECTION (Except for U.S.A.)

Model	: MD-1045
Type	: Low mass type, moving magnet (MM)
Frequency response	: 10 Hz — 25,000 Hz
Output	: 2.5 mV (1 kHz, 50 mm/sec lateral)
Channel separation	: 25 dB (1 kHz) (Test record TRS-1)
Load resistance	: 47 kohms
Compliance	: 9×10^{-6} cm/dyne (Dynamic)
Stylus tip	: 0.6 mil diamond
Stylus	: DT-45
Optimum tracking force	: 1.25 g

GENERAL

Dimensions	: 97(H) x 435(W) x 360(D) mm
Net weight	: 4.5 kg (9.9 lbs)

Accessories

EP adaptor	1
Cartridge fixing screw and screw-driver	1 each (only for U.S.A.)

POWER SPECIFICATIONS

Countries	Line Voltage & Frequency	Power Consumption
U.S.A. & CANADA	AC 120 V, 60 Hz	10 watts
EUROPE & W. GERMANY	AC 220 V~, 50 Hz	
U.K. & AUSTRALIA	AC 240 V~, 50 Hz	
U.S. MILITARY MARKET & OTHER AREAS	AC 110/120/220/240 V~ selectable, 50/60 Hz	

Design and specifications subject to change without notice.

2. Service Precautions

- (1) When replacing parts marked \triangle , be sure to use the specified parts to ensure safety.
- (2) When removing the tonearm, motor, mechanism, etc., be sure to check or adjust the lead-in position.
- (3) When servicing the motor for proper speed, be sure to install it level.
- (4) Since the rotor of the motor uses magnets, be careful to avoid iron powder, etc. when servicing.
- (5) The power cord is connected to the primary lead wires of the power transformer using a solderless connector. When this connector has to be replaced to replace the transformer, etc., be sure to check the new connector connection.
- (6) The lubricants listed below are employed in the L-L1; do not use other than those specified.

Name	Application place
Furoyl GP-501A Furoyl GB-TS-1	1:1 mix Engagement section between worm and worm gear Engagement section between both ends of worm ass'y and bearing stand Engagement section between pulley (M) and shaft
Anderole 732	Mechanism base: Engagement section between roller and shaft Thrust sliding section between roller and mechanism base
GP-608	Pipe

- (7) This unit has a construction in which the bottom board floats on springs away from the cabinet. With this construction, the playback system including the cartridge, etc. is isolated from the effects of sound pressure, etc. on the cabinet and dust cover. This leads to a greatly improved howling margin. After completion of repairs, be careful that the cabinet and the bottom board are not connected by shaping the wires correctly before joining them.

- (8) Handling the flat card (very thin parallel wire)
For the above construction, this unit employs a flat card with low mechanical resistance to connect the board ass'ies on the cabinet and bottom board sides. When handling this, pay attention to the following points:
 - 1) Do not bend the terminal section too much.

Fig. 2

- 2) When inserting into the socket.
 - a) Hold the wire section and section A together.
 - b) Paying attention to the direction, insert it into the socket fully until it stops.

Fig. 3

- 3) When replacing the socket.
 - a) Do not apply a soldering iron for a long time.
 - b) Be careful the copper foil does not peel off the board.

3. Foot Ass'y and Installation Positions

Fig. 4

4. Names of Parts and Their Functions

① POWER switch

ON (—) : Press to set to this position to turn the power on; the indicators will light.

STAND BY (■) : Press to set to this position to turn the power off.

Note:

Even when the POWER switch is off, this turntable consumes a small amount of electricity (2.5 watts). Disconnect the power cord to turn the electricity off completely.

② REPEAT button

Press this button to repeat a record. The REPEAT indicator will light. To release this function, press it again; the indicator will go out.

③ Tonearm movement control (< , >)

< : Press this side to move the tonearm to the left, the tonearm stops when the button is released.

> : Press this side to move the tonearm to the right, the tonearm stops when the button is released.

④ UP/DOWN & START/STOP button

UP/DOWN : Press this side to lift or lower the tonearm. Use this function for manual operation or when you want to stop playing temporarily in the middle of a record. When playing records manually, move the tonearm to the required position using the tonearm movement control, then press this button to lower the tonearm.

START/STOP: Press this side to play a record or to stop the playing of the record. When this is pressed to start playing a record, it acts as the start button and when this is pressed while a record is being played, it acts as the stop button.

Note:

When using the UP/DOWN & START/STOP button or the < , > button, be sure to press one end of the button.

⑤ SPEED button

Set this button according to the speed of the record. The corresponding speed indicator will light.

⑥ SIZE button

Set this button according to the size of the record. The corresponding size indicator will light.

⑦ Indicators

REPEAT indicator:

Lights red when the REPEAT button is set to on.

17 size indicator:

Lights red when 17-cm is selected with the SIZE button.

30 size indicator:

Lights red when 30-cm is selected with the SIZE button.

45 speed indicator:

Lights green when 45 rpm is selected with the SPEED button.

33 speed indicator:

Lights green when 33-1/3 rpm is selected with the SPEED button.

Note:

When the power is applied, the "30" and "33" indicators light.

⑧ Arm rest

⑨ Linear tracking tonearm

In record cutting, a linear tracking arm is used to cut a groove with very close correspondence to the original signal.

To enable the tonearm to follow the signal in exactly the same way as in record cutting, it is preferable to have a tonearm working on the same linear tracking principles. The main advantages of this tonearm are:

1. Because there is almost no tracking error, high frequency harmonic distortion is eliminated.
2. Because no inside force is generated, the pressure of the stylus on the left and right walls of the groove is equal so that channel separation is improved, tracking ability is better and intermodulation distortion is greatly reduced.
3. Because the tonearm is shorter, its weight is reduced; this improves tracking ability together with low frequency response.

5. Removal Procedures

5-(1) Replacement of stylus

How to remove the old stylus (Figs. 5 and 6)

Hold the cartridge and press the end of the stylus assembly in the direction of the arrow.

How to fit a new stylus (Figs. 5 and 6)

Being careful not to touch the stylus tip, fit the stylus assembly on the cartridge in the direction of the arrow.

Note:

The service life of the stylus depends on conditions of use; the standard is between 800 and 1600 hours.

Fig. 5

Fig. 6

5-(2) Replacement of cartridge

1. Remove the cartridge fixing screw (Fig. 7).

2. Pull the cartridge forward as shown in Fig. 8.

Note:

A plug-in cartridge is used for the L-L1. Therefore, specify a **T4P** type cartridge when purchasing a new cartridge.

Fig. 7

Fig. 8

5-(3) Removal of cabinet

(1) Remove the four foot mounting screws from the bottom board.

(2) Remove the cord stopper of the signal cord.

(3) Remove the tonearm cover and the two pan head screws in the base of the arm as shown in Fig. 9. In addition, be sure to cover the stylus with the stylus cover to protect it.

(4) While holding the pipe joint by hand, pull the arm pipe slightly towards you (Step 1) and lift the arm pipe until it stops. (Step 2)

(5) Remove the cabinet cover at the base of the arm. (Step 3) (Move out the cabinet cover to the rear while pressing down the area marked by an arrow as shown in Fig. 11.)

(6) Set up the cabinet paying attention to the arm and rest sections.

At this time, note that the cabinet and the bottom cover are joined using wires, etc.

Fig. 9

Fig. 10

Fig. 11

5-(4) Removal of arm angle photocoupler P.C. board

1. Remove the stopper screw. (Fig. 13)

2. Turn the screw counterclockwise as shown in Fig. 12. Then, in the state in Fig. 12, pull out the board.

Fig. 12

5-(5) Replacement of cueing motor and installation of elevator

1. To remove the motor, remove screws ① and ② as shown in Fig. 13.
2. After replacing the motor, install the elevator in the following procedure.
 - (1) Set the arm height adjustment cam "A" as shown in Fig. 14 in reference to the elevator lever.
 - (2) While pushing the elevator lever against cam "A" with a finger, turn the lead terminal section of the motor rotor fully clockwise, then return it about 8° and tighten the setscrew.

(In the state that the lead terminal section is returned about 8° , its clearance from the resin part is about 2 mm as shown in Fig. 15.)

Notes: 1. After setting the elevator lever, lock the setscrew with adhesive.
 2. After replacing the cueing motor, be sure to perform all adjustments again.

Fig. 13

Fig. 14

Fig. 15

5-(6) Removal of arm ass'y

1. Remove screw "A" (in Fig. 13), then remove the mechanism base ass'y from the bottom board.
2. Unsolder the lead wires of the tonearm.
3. Untighten the screw shown in Fig. 16, then pull out the stopper.
4. Pull out the arm ass'y upwards.

Fig. 16

6. Rope Stringing

7. Adjustment Procedures

7-(1) Arm parallel adjustment

With the elevator lever lifted up, adjust so that the center line of the pipe arm and the longitudinal outline of the bottom board are parallel using pin "b". (Fig. 18)

7-(2) Stylus height adjustment

- (1) With the elevator lifted up, adjust the height from the record surface to the cartridge body using cam "A". (Fig. 19)

Note: Cam "A" has no directionality.

- (2) After adjusting the stylus height, adjust the clearance between pin "a" and the under side of the lever of the tonearm to about 0.1 mm by turning pin "a". (Fig. 20) (The clearance should be as small as possible.)

Note: Pin "a" turns 360°, but adjust in the right angular range of 180°. (Adjust with pin "a" set toward the pivot center.)

7-(3) Offset adjustment

- (1) Move the arm to the left to release it from the rest.
- (2) Lift the elevator.
- (3) Adjust the output voltage of the arm offset angle detecting photointerrupter to 25 mV — 35 mV by turning cam "B". This output voltage is measured between test points TP-1 and TP-2 with a short between TP-3 and TP-4.

7-(5) Motor speed adjustment

- (1) Speed check
Play back a frequency test record (SS-4141) to measure the frequency deviation.
- (2) 33-1/3 RPM measurement
Play back any one of bands 1, 3 and 5 of the frequency test record (SS-4141), then read the frequency on a counter. This reading should be 3150 Hz $\pm 0.2\%$ (3144 to 3156 Hz).
- (3) 45 RPM measurement
Set the speed select switch to 45 RPM, play back any one of bands, 2, 4 and 6 of the frequency test record (SS-4141) and read the frequency on a counter. This reading should be 3150 Hz $\pm 0.2\%$ (3144 to 3156 Hz).
- (4) When the measurement value is out of the specified frequency range, adjust the adjustment holes (A and B) on the bottom board in the following procedure. (Fig. 21)
 1. Set the speed select switch to "33-1/3", adjust adjustment hole "A" (VR802) to obtain the frequency value in item (2).
 2. Switch the speed select switch over to "45", adjust adjustment hole "B" (VR801) to obtain the frequency value in item (3).

Notes: 1. Be sure to perform the 33-1/3 RPM adjustment first.

When the 33-1/3 RPM adjustment has been performed again after the 45 RPM adjustment, it is needed to carry out the 45 RPM adjustment again.

2. Cover the shank of the screwdriver with PVC tape to protect the bottom case from accidental shorting.

7-(4) Lead-in adjustment

Adjust the 30-cm lead-in count to 23 ± 2 by turning cam "C". In addition, check the 17-cm lead-in and lead-out.

	Test record	Count	—
30 cm lead-in	SS-4343	23 ± 2	Adjustment
17 cm lead-in	SS-4445	23 ± 5	Check
17 cm lead-out	SS-4445	26 ± 2	Check

12. Power Cord Connections in Different Areas

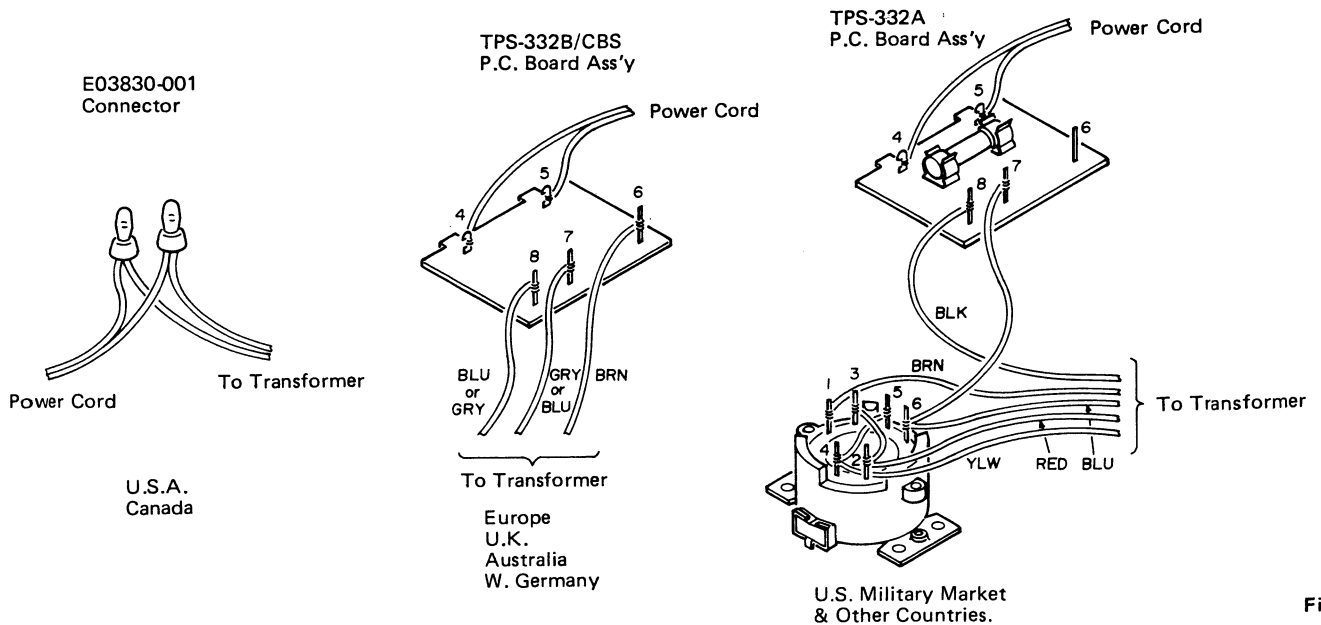

Fig. 29

12-(1) How to handle the solderless connector

In this turntable, a solderless connector is used to connect the power cord with the primary lead wire of the power transformer.

When it is unavoidable to replace this connector for replacement of the power transformer, or the like, positively perform the replacement in accordance with the following procedure to avoid dangers.

- **Connector part number**
E03830-001
- **Tools**
Tool for installing solderless connectors.
Do not use those (small cutting pliers, etc.) other than regular tools.
Example: VACO No. 1963 (Courtesy Vaco Products Co.)

Fig. 30

● Replacement

1. Cut both the power cord and the primary lead wire at near the edge of the connector to be replaced.

Note: Do not re-use the used connector.

Fig. 31

Fig. 32

2. Peel off the coverings so that the respective conductor tops appear by about 15 mm as shown in the Fig. 32.
Note: In the case of stranded wires, test each wire.
3. Adjust the tips of the power cord and the primary lead wire with each other, then securely insert them into the connector as shown in the Fig. 33.

Fig. 33

Fig. 34

4. Secure the nearly equal central part of the metal sleeve with the second concave of the tool for solderless securing as shown in the Fig. 34.
Note: Perform a complete securing.
5. After solderless securing, check the following as shown in the Fig. 35.

Note: Protect connector with isolation tape or vinyl tube for safety. Furthermore, clamp it for out of touch with metal part.

Fig. 35

13. Packing Materials and Parts Numbers

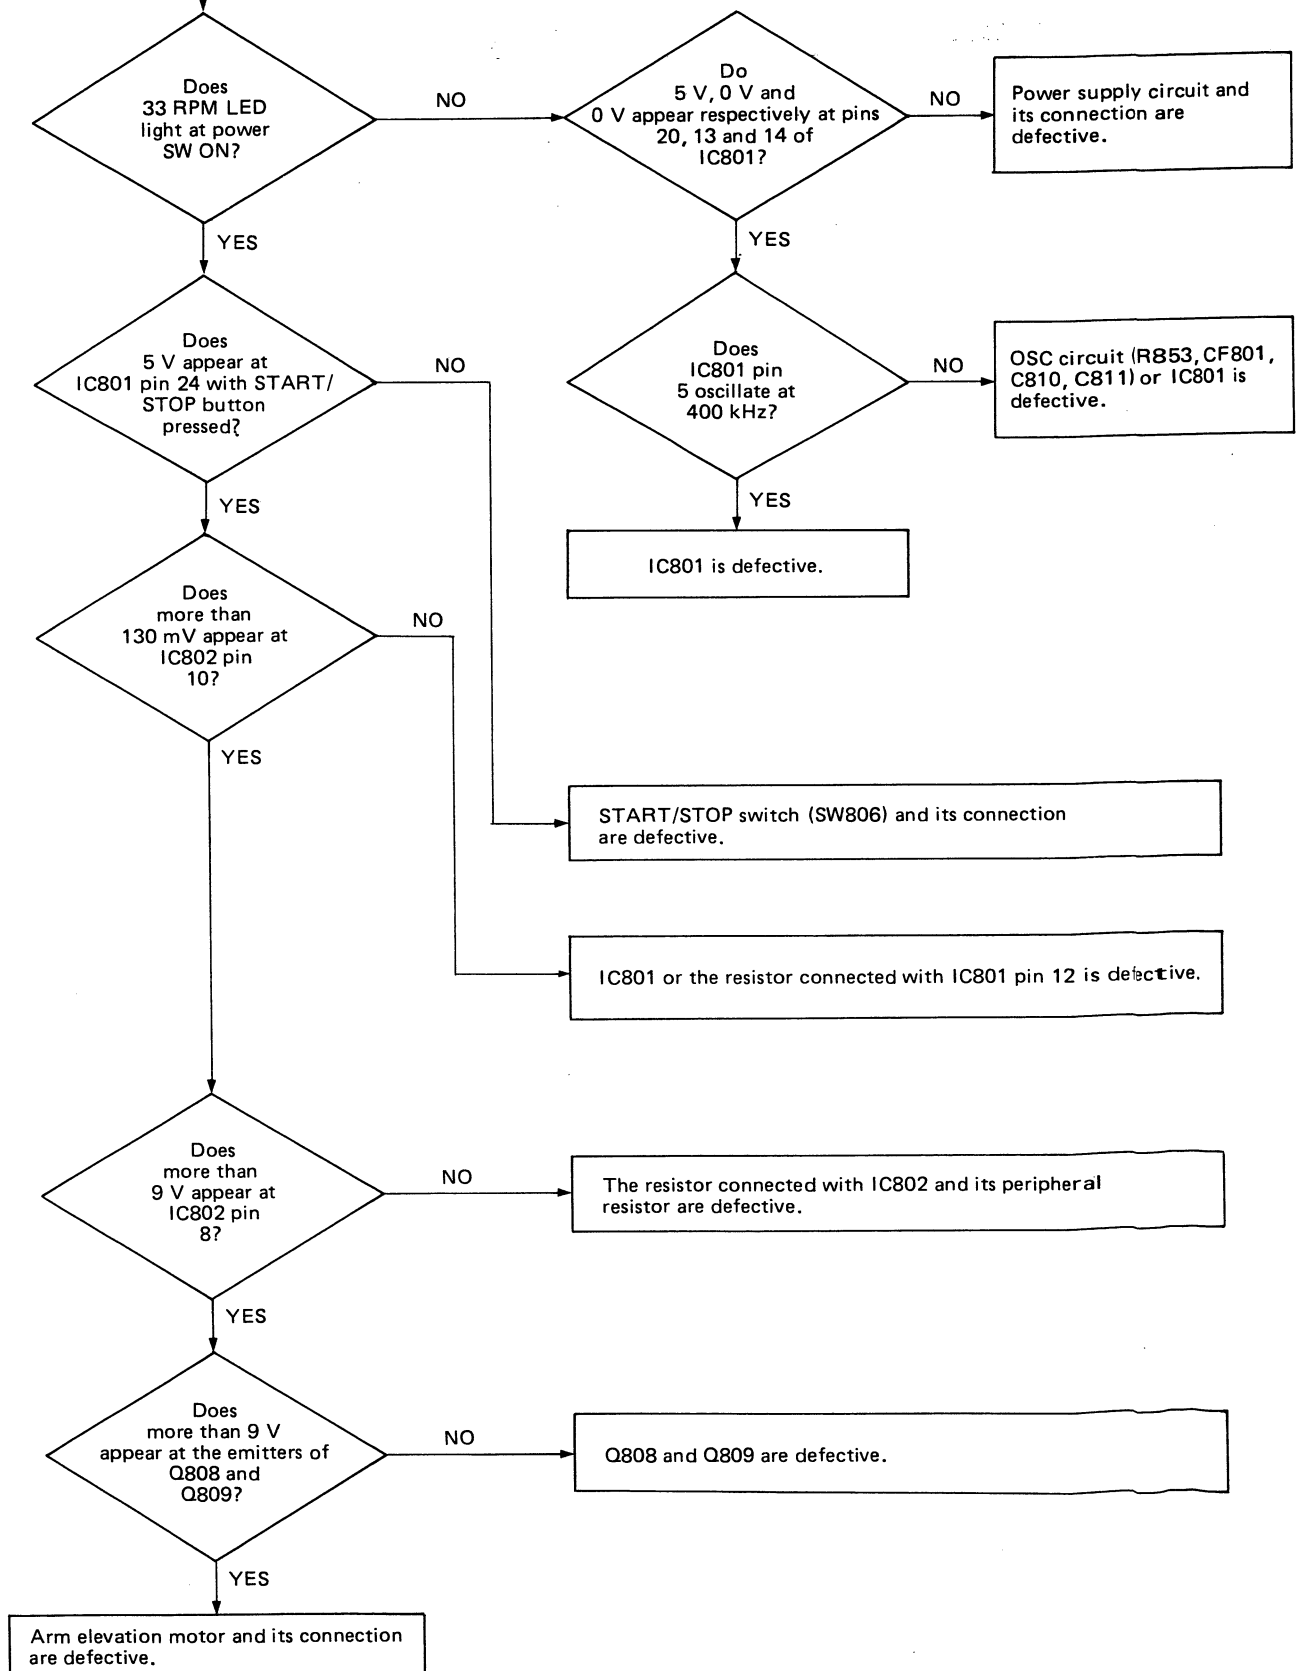

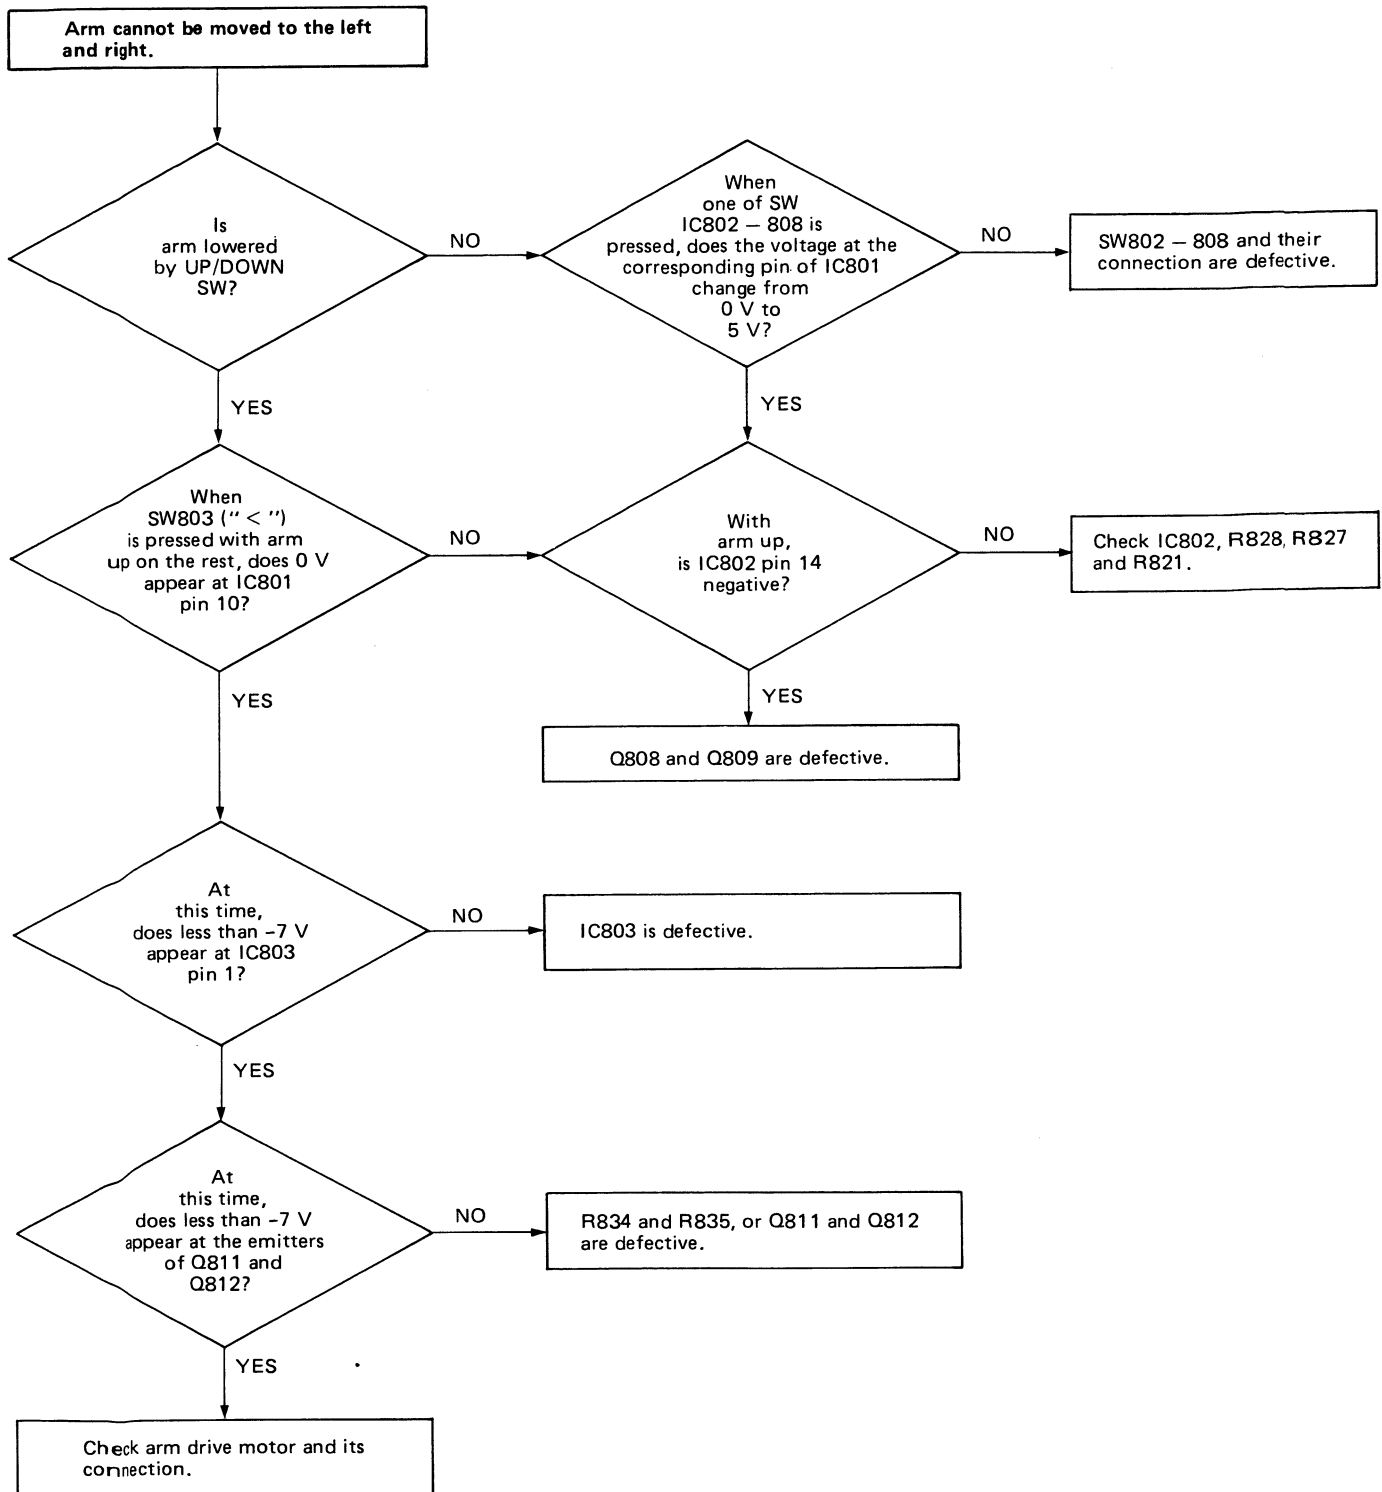

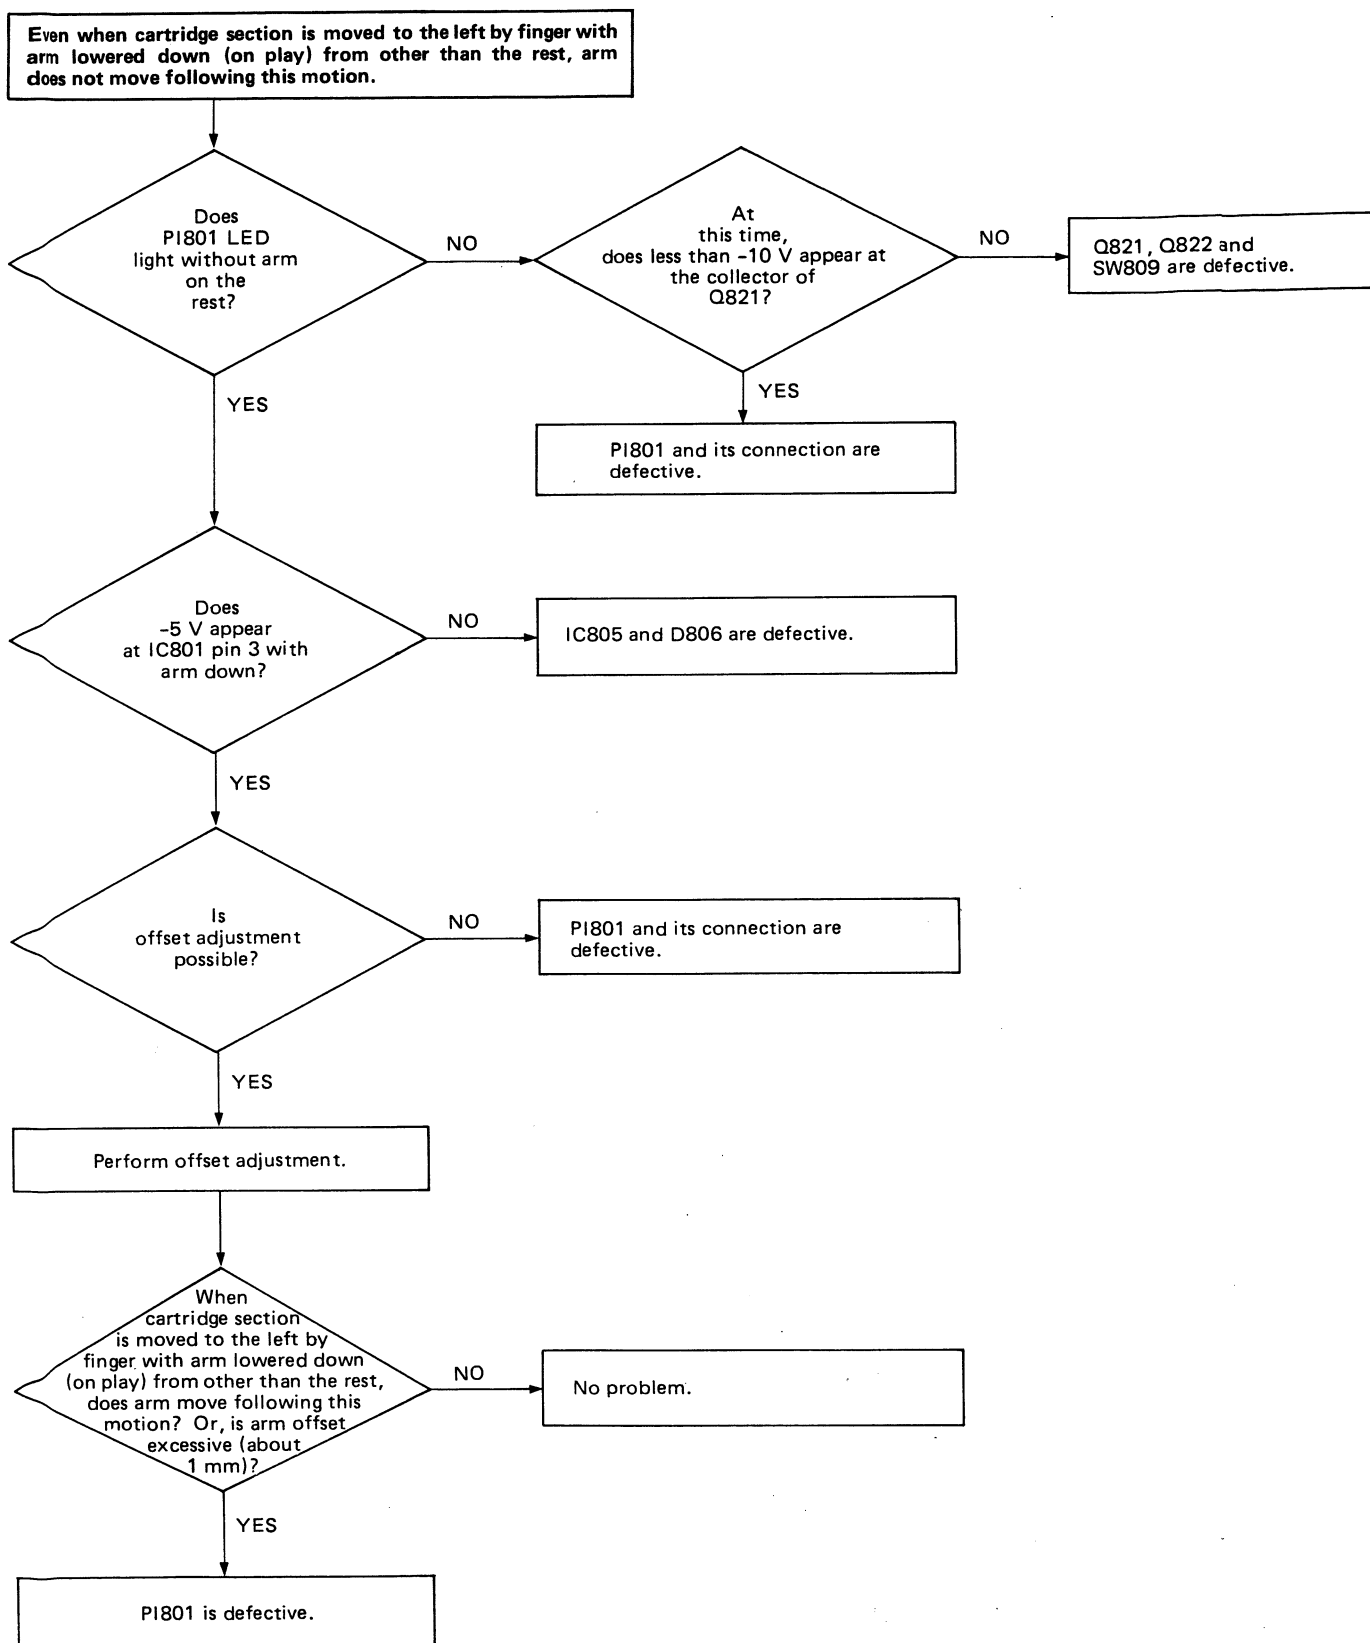

Fig. 36

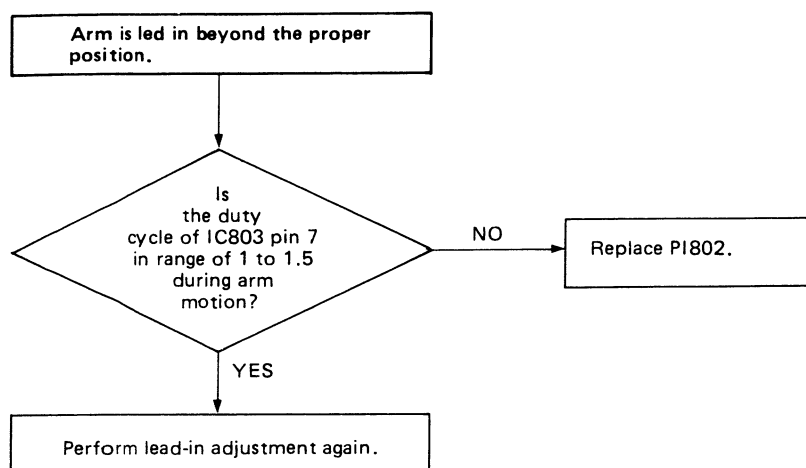

14. Troubleshooting

Even when START/STOP, ">", "<" or UP/DOWN button is pressed, arm is not lifted.

16. L-L1 Schematic Diagram

16-(1) Control section

16-(2) Power supply section

Notes:

- indicates positive B power supply.
- indicates negative B power supply.
- indicates signal path.
- Voltage values measured with a tester (impedance 20 kΩ/V) in mode of "33-1/3 r.p.m." are indicated as below.
Example: ■ (unit: V)

- When replacing the parts in the darkened area (■) and those marked with △, be sure to use the designated parts to ensure safety.
- This is the standard circuit diagram.
The design and contents are subject to change without notice.
